Professional Profile

Highly motivated BSc Artificial Intelligence and Data Science student at The University of Northampton, building a solid foundation in Machine Learning, Data Analysis, and NLP/LLMs. Seeking to leverage expertise in Python, JavaScript, and Recognised for initiative, clear communication, and teamwork, supported by leadership experience in mentoring and workshop delivery.

Education

Ashlawn School GCSEs	Sept 2018 – July 2021
Ashlawn School A-Levels	Sept 2021 – June 2023
University of Northampton BSc Artificial Intelligence and Data Science	Sept 2023 – Present

Experience

Dotcom Personal Shopper, Tesco – Rugby, England, UK Oct 2021 – Present

- Work quickly to pack orders efficiently.
- Document substitutions and provide detailed information to customers.
- Follow all company standards and pay careful attention to customer requests.
- Combine skills from various departments to provide flexible, cross functional support.

Human Appeal (Volunteer) – On-site Jan 2024 – Present

- Gained experience in collaboration, effective communication, and advocacy in a humanitarian setting.
- Helped organise and promote humanitarian campaigns and charitable initiatives.
- Worked to highlight global challenges and contributed to aid delivery for at risk populations.
- Support community outreach, fundraising drives, and seasonal campaigns to raise public awareness.
- Assist with logistical planning, donation management, and strategies to boost community engagement.

Software Engineer Intern, Computer Gurus Limited – Remote, Royal Tunbridge Wells, England, UK Jun 2025 – Present

- Contributing to CRM software development, including feature implementation and system improvements
- Debugging and resolving technical issues to ensure smooth application performance.
- Creating documentation and test reports for development cycles.
- Collaborating with senior engineers to deliver maintainable, high quality code.

Bright Network Internship Experience (IEUK) 2025: Technology & Engineering, Remote July 2025 – July 2025

- Completed a competitive 4 day virtual programme with a 48 hour hackathon style challenge.
- Developed a technical solution independently under time pressure, presenting to assessors.
- Gained insights from professionals at Google, Cisco, JLR, EY, Sky, MBDA, and UK security services.

Artificial Intelligence Intern, Centre for Factories of the Future – Hybrid, Kenilworth, England, UK August 2025 - November 2025

- Conducted research into AI tools, models, and real world industrial applications.
- Prepared clear reports and presented findings to directors.
- Supported early stage AI development work for internal innovation projects.

AI Lead Mentor, FEMETRONICS – Remote, England, UK September 2025 - Present

- Lead AI research projects on LLMs, machine learning, and NLPs.

- Delivering online workshops introducing AI and cloud computing fundamentals to learners.

AWS PartyRock Hackathon (Team Member), AWS – Remote

Sept 2025 - Nov 2025

- Collaborated in a team of three to develop Symptom Sense, a healthcare chatbot application.
- Designed the chatbot to intake user provided symptoms and provide a potential diagnosis or relevant health information.

President and Founder of Desi Society – The University of Northampton

Nov 2025 - March 2026

- Founded and led the Desi Society, successfully managing all aspects of the society's operations and strategy.
- Organised and promoted cultural, social, and networking events for members.
- Built a vibrant and inclusive community, enhancing student engagement and campus diversity.

Projects

Software Engineering Project

Oct 2024 - Jan 2025

- Collaborated as part of a team to gather client requirements and design a custom software solution.
- Developed system specifications, architecture diagrams, and documentation.
- Took leadership responsibility in coordinating tasks and evaluating documentation quality.

BMI Calculator and Word Analyser

Oct 2024 - Jan 2025

- Created a Python program to calculate BMI and analyse text files using string logic.
- Designed functions for reading, processing, and summarising user input.
- Strengthened problem solving and algorithmic thinking.

Snack Man Game

March 2025 - May 2025

- Built a Pac Man inspired browser game using HTML, CSS, and JavaScript.
- Implemented movement mechanics, collision detection, and score tracking.
- Applied DOM manipulation and user interaction logic to improve gameplay.

Portfolio Website

July 2025 - August 2025

- Designed and coded a responsive portfolio website using HTML, CSS, and JavaScript.
- Showcased projects, experience, and skills in a clean, modern layout.
- Deployed via GitHub Pages with attention to accessibility and UI design.

Analysis and Modeling Houseprice Dataset

Sept 2025 - Nov 2025

- Analysed a housing dataset using machine learning and data visualisation to identify market trends and generate insights.
- Cleaned and preprocessed the data, then developed a regression model to predict house prices from property features.
- Applied clustering to group houses into price categories and built a classification model to predict those categories when exact prices were unavailable.
- The project combined technical modelling with clear business focused explanations, helping translate data insights into practical recommendations.

F1 Flux Project

Nov 2025 - Jan 2026

- Led a AI and data science project with FEMETRONICS by utilising a real life F1 dataset to analyse model fairness.
- Managed and mentored 6 female researchers, ensuring progress and technical quality.
- Demonstrated through data analysis that an initial AI model exhibited bias against specific Formula 1 teams.
- Mitigated bias by implementing a strategy of training separate AI models for distinct team groupings, improving overall model fairness and accuracy.

Deep learning Model for Palm Recognition

Nov 2025 - Jan 2026

- Developed a deep learning palm recognition system using Python, TensorFlow/Keras, and image preprocessing techniques to classify registered users from close-up palm images.
- The project involved creating and preparing a custom dataset, designing and training a multi-class image

classifier, and evaluating its performance using accuracy metrics and live camera testing.

- Considered practical issues such as unknown palm detection, dataset bias, and ethical challenges in biometric system design.
- This project strengthened my skills in computer vision, deep learning, model evaluation, and applied AI problem solving.

Skills

Languages: Python, JavaScript, HTML, CSS, PHP, MySQL, C++

Frameworks & Tools: GitHub, VS Code, Cisco Packet Tracer, Docker, MySQL Workbench, Oracle Software

Soft Skills: Team collaboration, Problem solving, Communication, Time management, Leadership
