Professional Profile

BSc Artificial Intelligence and Data Science student at the University of Northampton with hands-on experience in machine learning, deep learning and NLP/LLMs, gained through internships, hackathons and research projects. Experienced in using Python for data analysis and AI model development, and in mentoring and leading AI research teams. Seeking a graduate role in AI, Data Science or the wider tech sector where I can build practical, responsible AI solutions.

Education

University of Northampton BSc Artificial Intelligence and Data Science	Sept 2023 – Expected November 2027
Ashlawn School A-Levels	Sept 2021 – June 2023
Ashlawn School GCSEs	Sept 2018 – July 2021

Experience

President and Founder of Desi Society – The University of Northampton Nov 2025 - March 2026

- Founded and led the society, managing all operations and strategy.
- Organised and promoted cultural, social, and networking events for members.
- Built an inclusive community, boosting student engagement and campus diversity.

AWS PartyRock Hackathon (Team Member), AWS – Remote Sept 2025 - Nov 2025

- Collaborated in a team of three to develop Symptom Sense, a healthcare chatbot application.
- Designed the chatbot to intake user provided symptoms and provide a potential diagnosis or relevant health information.

Mentor, FEMETRONICS – Remote, England, UK September 2025 - Ongoing

- Lead AI research projects on LLMs, machine learning and NLP, including F1 Flux, where a team of 6 researchers identified and reduced bias in an AI model.
- Delivering online workshops introducing AI and cloud computing fundamentals to learners.

Artificial Intelligence Intern, Centre for Factories of the Future – Hybrid, Kenilworth, England, UK August 2025 - November 2025

- Researched AI tools, models and real-world industrial application.
- Prepared reports and presented findings to directors.
- Supported early-stage AI development for internal innovation projects.

Bright Network Internship Experience UK (IEUK) 2025: Technology & Engineering – Remote July 2025 – July 2025

- Completed a competitive 4-day virtual programme, including a 48-hour hackathon-style challenge.
- Independently built a technical solution under time pressure and presented it to assessors.
- Gained insight from professionals at Google, Cisco, JLR, EY, Sky, MBDA and UK security services.

Software Engineer Intern, Computer Gurus Limited – Remote, Royal Tunbridge Wells, England, UK Jun 2025 – Ongoing

- Build features and system improvements for CRM software.
- Debug and resolve technical issues to keep the application running smoothly.
- Write documentation and test reports for each development cycle.
- Work with senior engineers to deliver maintainable, high-quality code.

- Human Appeal (Volunteer)** – On-site Jan 2024 – Ongoing
- Help organise and promote humanitarian campaigns, fundraising drives and seasonal appeals.
 - Support community outreach, logistics and donation management to raise awareness and engagement.
- Dotcom Personal Shopper**, Tesco – Rugby, England, UK Oct 2021 – Ongoing
- Pick and pack orders quickly and accurately, recording substitutions and giving customers clear information.
 - Meet company standards and customer requests while supporting multiple departments as needed.

Projects

- Deep learning Model for Palm Recognition** Nov 2025 - Jan 2026
- Built a deep learning system that classifies registered users from close-up palm images.
 - Created a custom dataset, trained a multi-class image classifier and evaluated it using accuracy metrics and live camera testing.
 - Addressed unknown-palm detection, dataset bias and ethical challenges in biometric system design.
- F1 Flux Project: AI Model Fairness** Nov 2025 - Jan 2026
- Led an AI and data science project using a real-world F1 dataset to analyse model fairness, mentoring 6 female researchers.
 - Showed through data analysis that the initial AI model was biased against specific F1 teams.
 - Reduced bias by training separate models for distinct team groupings, improving overall fairness and accuracy.
- House Price Analysis and Modelling** Sept 2025 - Nov 2025
- Analysed a housing dataset to identify market trends, then cleaned the data and built a regression model to predict prices from property features.
 - Used clustering to group houses into price categories and built a classification model to predict those categories when exact prices were unavailable.
 - Turned model results into clear, business-focused recommendations.
- Portfolio Website** July 2025 - August 2025
- Designed and coded a responsive portfolio website using HTML, CSS, and JavaScript.
 - Showcased projects, experience, and skills in a clean, modern layout.
 - Deployed via GitHub Pages with attention to accessibility and UI design.
- Snack Man Game** March 2025 - May 2025
- Built a Pac Man inspired browser game using HTML, CSS, and JavaScript.
 - Implemented movement mechanics, collision detection, and score tracking.
 - Applied DOM manipulation and user interaction logic to improve gameplay.

Skills

AI & Data Science: Machine Learning, Deep Learning, TensorFlow, Keras, NLP, LLMs, Data Analysis, Data Visualisation

Languages: Python, JavaScript, HTML, CSS, PHP, MySQL, C++

Frameworks & Tools: GitHub, VS Code, Cisco Packet Tracer, Docker, MySQL Workbench, Oracle Software

Soft Skills: Team collaboration, Problem solving, Communication, Time management, Leadership
